Comprehensive reference covering game history, agents, maps, weapons, game modes, and the full Valorant Champions Tour (VCT) pro scene.

Valorant History & Overview

TW: Taiwan Mobile (since May 14, 2020)[2]

August 2, 2024 (PlayStation 5, Xbox Series X/S)

Valorant (stylized in all caps) is a 2020 first-person tactical hero shooter video game developed and published by Riot Games.[5] A free-to-play game, Valorant takes inspiration from the Counter-Strike series, borrowing several mechanics such as the buy menu, spray patterns, and inaccuracy while moving. Development started in 2014 and was teased under the codename Project A in 2019; the game was released on June 2, 2020, for Windows. It was ported to the PlayStation 5 and Xbox Series X/S in June 2024, albeit without crossplay between PC and console clients. A mobile version, Valorant Mobile (Chinese: [6]), launched in China on August 19, 2025, with a global release set at a later date.

Valorant is a team-based first-person tactical hero shooter set in the near future.[7][8][9][10] Players play as one of a set of Agents, characters based on several countries and cultures around the world.[10] In the main game mode, players are assigned to either the attacking or defending team with each team having five players on it. Agents have unique abilities, each requiring charges, as well as a unique ultimate ability that requires charging through kills, deaths, orbs, or objectives. Every player starts each round with a "classic" pistol and one or more "signature ability" charges.[8] Other weapons and ability charges can be purchased using an in-game economic system that awards money based on the outcome of the previous round, any kills the player is responsible for, and any objectives completed. The game has an assortment of weapons including secondary guns like sidearms and primary guns like submachine guns, shotguns, machine guns, assault rifles and sniper rifles.[11] There are automatic and semi-automatic weapons that each have a unique shooting pattern that has to be controlled by the player to be able to shoot accurately.[12] As of December 2025[update], the game offers 28 agents to choose from.[13] Five agents are unlocked at account creation, with the rest unlocked using an in-game currency called Kingdom Credits. Kingdom Credits can be acquired by playing games or completing daily and weekly tasks, and can be spent on unlocking new agents or cosmetic items. However, within the first 28 days of release, new Agents can only be unlocked with Valorant Points (VP), Agent Recruitment Events, or by having a linked and active Xbox Game Pass subscription.[14][15] VP is an in-game currency that can only be obtained by purchasing it with real money, and it can be spent on cosmetic items or new agents.[16][17]

In the standard non-ranked mode, the match is played as best of 25, with the first team to win 13 rounds winning the match. The attacking team has a bomb-type device called the Spike. They must deliver and activate the Spike on one of the multiple specified locations (bomb sites). If the attacking team successfully protects the activated Spike for 45 seconds it detonates, destroying everything in a specific area, and they receive a point.[8] If the defending team can deactivate the Spike, or the 100-second round timer expires without the attacking team activating the spike, the defending team receives a point.[18] If all the members of a team are eliminated before the Spike is activated, or if all members of the defending team are eliminated after the Spike is activated, the opposing team earns a point.[8] If both teams win 12 rounds, sudden death occurs, in which the winning team of that round wins the match, differing from overtime for competitive matches. Additionally, if after 4 rounds, a team wishes to forfeit that match, they may request a vote to surrender. If the vote reaches 4 (in contrast to 5 for competitive), the winning team gets all the victory credit for every round needed to bring them to 13, with the forfeiting team receiving losing credit.[19] A team gets only three chances to surrender: once in the first half, once in the pistol round of the second half, and once more in the second half.

In the Spike Rush mode, the match is played as best of 7 rounds, with the first team to win 4 rounds winning the match. Players begin the round with all abilities fully charged except their ultimate, which charges twice as fast as in standard games. All players on the attacking team carry a spike, but only one spike may be activated per round. Guns are randomized in every round and every player begins with the same gun. Ultimate point orbs in the standard game are present, as well as multiple different power-up orbs.[20]

Swiftplay matches are simply a shortened version of the Unrated game mode. 10 players are split into 2 teams, attackers and defenders. Attackers must plant the spike while the Defenders must stop them. What differs Swiftplay to Unrated is that it is best of 9 rounds - the first team to win 5 rounds wins the match. On

round 4, the team's players switch, as they would do in round 13 in the Unrated game mode. The game's currency system is different than Unrated, with players earning more credits earlier, allowing for more parity across the two teams. Swiftplay is meant as a quick game mode, averaging around 15 minutes per game, as opposed to around 40 minutes for Unrated.[21]

Competitive matches are the same as unranked matches with the addition of a win-based ranking system that assigns a rank to each player after 5 games are played. Players are required to reach level 20 before playing this mode.[22][23] In July 2020, Riot introduced a "win by two" condition for competitive matches, where instead of playing a single sudden death round at 12-12, teams will alternate playing rounds on attack and defense in overtime until a team claims victory by securing a two-match lead. Each overtime round gives players the same amount of money to purchase guns and abilities, as well as approximately half of their ultimate ability charge. After each group of two rounds, players may vote to end the game in a draw, requiring 6 players after the first set, 3 after the second, and thereafter only 1 player to agree to a draw. The competitive ranking system ranges from Iron to Radiant. Every rank except for Radiant has 3 tiers.[24][25][26] Radiant is reserved for the top 500 players of a region, and both Immortal and Radiant have a number associated to their rank allowing players to have a metric in which they can compare how they rank up to others at their level.[27]

Premier is a 5v5 gamemode that allows players a path-to-pro competitive game mode that is aimed towards players that wish to be a professional player. Premier was first introduced in alpha testing in Brazil before being rolled out worldwide by 2024. Players will need to create a team of five to compete against other teams in divisions. Each season will last a few weeks and the top teams will be invited to compete in the Division Championship, with winning teams able to be promoted to their region's Challengers league and therefore be part of the VCT ecosystem. This gamemode includes a pick-and-ban system for maps unlike all the other gamemodes where the players have to play the map selected by the system.[28]

The Deathmatch mode was introduced on August 5, 2020.[29] 14 players enter a 9-minute free-for-all match and the first person to reach 40 kills or the player who has the most kills when time is up wins the match. The players will spawn with a random agent, equipped with a max shield and an infinite supply of credits to buy any weapons from the buy menu. All abilities are disabled during the match, which indulges pure gunplay.[30] Green health packs drop on every kill, which reset the player to maximum health, armor, and replenish the ammunition in each of their guns.[31]

The Team Deathmatch gamemode was announced on June 15, 2023, and went live on June 27 with patch 7.0. This gamemode combines and borrows elements from the standard unrated mode as well as the regular deathmatch mode. It is a free-for-all gamemode where players are split into two teams with five players each. Each match lasts for 9 minutes and 30 seconds, and the first team that reaches 100 kills win. If neither team has reached 100 kills at the end of the 9.5 minutes, then the team with the most kills wins. Each match is split into four stages, with the weapon selection becoming progressively more powerful as players advance through the stages. Players are respawned in a spawn room after being killed. where they will be able to select and adjust their weapons loadout if needed. Unlike the regular deathmatch mode, players need to select their agents before the match begins, as agent abilities are allowed in this gamemode. Players can charge their agents' ultimate abilities either by acquiring Ultimate Orbs spawned randomly throughout the map, or by getting kills. Their ultimate abilities will be available for use after their ult percentages reach 100%. Agents can also use their normal abilities multiple times, but they will have a cooldown between uses. Unlike all other gamemodes, this mode is not played on the standard maps, but rather on its own set of five maps that are specifically designed for team deathmatch: Piazza, District, Kasbah, Drift, and Glitch.[32] [33] [34]

The Escalation gamemode was introduced on February 17, 2021[35] and is similar to the "gungame" concept found in Counter-Strike and Call of Duty: Black Ops, though it is team-based rather than free-for-all with 5 players on each team. The game will pick a random selection of 12 weapons to move through. As with other gungame versions, a team needs to get a certain number of kills to advance to the next weapon and the weapons get progressively worse as the team moves through them.[36] There are two winning conditions, if one team successfully goes through all 12 levels, or if one team is on a higher level than the opposing team within 10 minutes. Just like Deathmatch, players spawn in as a random agent, unable to use abilities, as the gamemode is set for pure gun fights. Though, abilities like Sova's shock darts, Raze's boom bot, and rocket launcher, are abilities that everyone gets to use as a weapon. After a kill, green health packs drop, which

replenishes the player's health, armor, and ammo to its maximum. The gamemode also has auto respawns on, respawning players in random locations around the map.[37][38]

The Replication gamemode went live on May 11, 2021.[39] During the agent select, players vote on which agent they would want to play as. At the end of the time, or after everyone has voted, the game randomly selects one of the player's votes. The entire team will then play as that agent, even if one of the players has not unlocked that agent. It is a best of nine, with the players switching sides after the fourth round. Players can buy guns and shields with a pre-set number of credits. Abilities are pre-bought. Weapons and shields are reset every round.[40] This gamemode was removed in patch 7.0.[41]

Skirmish was introduced on October 3, 2025, and is only available in custom mode. Players are placed in a choice of 3 small enclosed arenas with the options of 1v1 to 5v5. Abilities are automatically disabled but hosts have the option to enable. No economy system exists and players are able to set any loadout and change them between rounds. Round timers are unlimited and players are forced to eliminate the enemy team until no players on the opposing side are alive to win a round. The default score to win are 10 rounds.[42]

Snowball Fight was a limited-time gamemode that was released on December 15, 2020, and is only available during the Christmas season.[43] It is a Team Deathmatch game mode, with 50 kills to win. The gamemode is played exclusively on the map Icebox. Abilities are not allowed to be used, and players spawn in as a random agent. The only weapon available is the snowball launcher, which is an instant kill, but slow, and uses a projectile-based arc. There is infinite ammo. Throughout the game a "portal" will spawn, delivering gifts, which each contain a random power up.[44][45]

All Random, One Site was introduced on January 6, 2026. It is a limited-time gamemode that involves a fast-paced 5v5 on a random choice of a small map pool, with barriers blocking off all bomb sites but one. The sole open bomb site is randomly chosen every round and are announced to players before the round begins. Players control a random agent every round. All players start off with 0% ultimate charge, with ultimate orbs placed around the map and granting 50% ultimate charge when captured. Kills grant 50% ultimate charge and killed players drop Ground Orbs containing their accumulated charge. No economy exists and players are free to set any loadout every round, though offerings are limited and escalate as the match progresses.[46]

There are a large variety of playable agents available in the game. Agents are divided into 4 roles: Duelists, Sentinels, Initiators, and Controllers. Each agent has a different role which indicates how the agent is usually played.

Duelists specialize in attacking and entering a bomb site for the team. Riot's official definition for duelists is "self-sufficient fraggers." [47] Duelists mainly create space for their team while entering onto a site, giving their teammates information, and making entering a site easier. Their abilities tend to consist of flashes which blind enemies, and movement-based abilities that allow for them to cover large distances faster than other agents. This type of ability kit allows for duelists to shine best when they are able to catch players off guard and get impact frags. On attack, duelists are most often expected to play forward, leading the attack. They are expected to be in front of everyone to get opening picks on enemies since their abilities often give them a competitive advantage when gunfighting an enemy. On defense, duelists will be holding choke points where enemies try to enter sites. Due to the mobility in their kits, they are able to get a pick and reposition, giving their team a numbers advantage.[48][49]

Sentinels are the defensive line, which specializes in locking down sites and protecting teammates from enemies. Their abilities mainly consist of static 'objects' that are obstacles to the enemies. These objects can give the team valuable information and/or deal damage. On attack, sentinels can use their abilities to cut off certain parts of the map or set up 'objects' that can ensure the enemy cannot flank without being noticed. On defense, sentinels can use their abilities to slow enemies from entering a site. This provides valuable time for the sentinels' team members to come and provide defensive support.[48][49][50]

Initiators plan out the offensive pushes. Initiators specialize in breaking through defensive enemy positions. Initiators' abilities can consist of flashes but also abilities that can reveal the location of enemies. This information allows for attackers to know where enemies are and make taking a site easier. On defense, initiators can use their abilities to provide information on where the attackers are going, as well as helping their teammates retake a lost site.[48][49]

Controllers specialize in "slicing up dangerous territory to set their team up for success." [47] They use their abilities to create coverage or clear out areas of space with crowd control. To help their team enter into enemy territory, their abilities consist of some kind of smoke, as well as molotovs, stuns, or flashes. With their smokes, controllers can control sightlines on the map, making it safer to move through the map without getting seen. On offense, controllers can smoke off certain sightlines and use their crowd control on common defensive spots to force enemies into the open. On defense, controllers can smoke and/or use crowd control on entryways to delay or discourage the enemy team from moving forward. [48] [49]

Valorant was developed and published by Riot Games, the studio behind League of Legends. [51] [10] Development started in 2014, within their research and development division. [7] Game director Joe Ziegler is credited with the initial idea of Valorant while formulating potential games with other Riot developers. [7] David Nottingham is the creative director for Valorant. [7] Trevor Romleski, former League of Legends's designer and Salvatore Garozzo, former professional player and map designer for Counter-Strike: Global Offensive are its game designers. [52] Moby Francke, former Valve developer, who has been art and character designer for Half-Life 2 and Team Fortress 2, is the art director. [53] [54]

Valorant was developed with two main focuses: making tactical shooters and e-sports more accessible to new players, and creating a game that would attract a large competitive scene, while solving many of the points of criticism voiced by professional players from games in the genre. [55] [56] [57] Games aimed at large, active communities and player bases, typically free-to-play games like Fortnite or Riot's own League of Legends, tend to put an emphasis on a wider array of system performance improvements and game stability rather than newer technologies or graphics as a way of making sure they're as accessible as possible. In interviews leading up to the game's launch, game director Joe Ziegler and producer Anna Donlon said that Valorant was made for people playing their first tactical shooter just as much as it was for professional players, and that accessibility of the game was a large priority. [56]

Riot chose to develop Valorant using Unreal Engine 4, which the development team said would allow it to focus on gameplay and optimizations rather than spending time on core systems. [58] [59] To meet the goal of a lower performance barrier so more people could play Valorant, the team set notably low minimum and recommended hardware requirements for the game. To reach 30 frames per second on these small requirements, the game's engineering team, led by Marcus Reid, who previously worked on Gears of War 4, had to make several modifications to the engine. These modifications included editing the renderer using the engine's mobile rendering path as base, or reworking the game's lighting systems to fit the static lighting that tactical shooters often require, as to not interfere with gameplay. [58] Unreal's modern underpinnings also helped to solve many of the issues that Riot set out to solve from other games in the genre, and additional modifications helped to meet the game's other goal of creating a suitable competitive environment, including optimizing server performance by disabling character animations in non-combat situations and removing unnecessary evaluations in the hit registration process. [60] [56] [58] During development, Riot made promises to work towards a ping of less than 35 milliseconds for at least 70% of the game's players. [61] To accomplish this, Riot promised 128-tick servers in or near most major cities in the world, as well as working with internet service providers to set up dedicated connections to those servers. [61] Due to the increase in internet traffic during the COVID-19 pandemic, Riot has had trouble optimizing connections to their promised levels. [62] As of July 29, 2025, Riot carried out their transition to Unreal Engine 5 with update 11.02 on all platforms and regions. [63]

On June 2, 2021, Riot Games announced its plans to develop a mobile version of Valorant, which would reportedly be the first step it intends to take to expand the game's universe. [64]

Riot Games launched Valorant Mobile in China on August 19, 2025, with a global release set at a later date. [65] [66]

On June 7, 2024, during Summer Game Fest, Riot announced that Valorant was to be ported over to the PlayStation 5 and Xbox Series X/S, with a limited beta beginning on June 14. The PS5 and Series X/S versions do not have cross-play with the PC version as the gameplay is tailor-made for the consoles, but inventory and progress will be synced with the PC version. [67]

Valorant was teased under a tentative title Project A in October 2019. [68] It was announced on March 1, 2020, with a gameplay video on YouTube called "The Round". [10] [69] [70] The closed beta of the game was

launched on April 7, 2020.[68] For a chance to obtain a beta access key, players were required to sign up for accounts with both Riot Games and the streaming platform Twitch and watch related streams.[71] This beta ended on May 28, 2020, with the game being fully released on June 2, 2020.[72]

The limited beta for the console port of Valorant opened on June 14, 2024. It will initially be limited to the United States, Canada, Europe and Japan with other regions joining at later dates. Unlike the PC beta, players are only required to sign up for accounts with Riot Games.[67]

Valorant had a full release on consoles on August 2, 2024.[73]

Valorant has been compared to Valve's Counter-Strike: Global Offensive, with both games having two teams of five attempting to plant a bomb,[9] and Blizzard Entertainment's class-based shooter Overwatch, as both games have multiple classes and characters catering to various playstyles.[79]

Austen Goslin of Polygon praised the beta of Valorant describing it as refined and "one of the most fun tactical shooters I've played".[7] On the first day of its beta launch, Valorant amassed the second most concurrent viewers for any game ever on Twitch, with 1.73 million viewers tuning in across dozens of streams. Many of these Twitch streams also had drops enabled, with viewers watching during this beta period in hopes of acquiring a beta game key.[80] Only another title from Riot Games, League of Legends, has had more concurrent viewers, when 1.74 million watched the 2019 World Championship final.[81]

The official Valorant Discord server has become the fifth largest gaming community on the social platform as of July 2025.[82]

Valorant has received criticism for its "toxic", male-dominated voice communication system. Emily Rand of ESPN talked about her negative experience playing on teams using the voice communication function as a female. Rand "flat-out [refuses] to use it at all" when she is not playing with her friends.[92] Jordon Oloman of The Guardian explains how "the bad apples among Valorant's players expect an absurd level of perfection, and the resultant voice-chat criticism is hardly constructive." [77] Furthermore, surveys have shown that 7980% of players reported to have experienced in-game harassment at some point.[93][94]

The game has been criticized for its anti-cheat software, Riot Vanguard, as it was revealed to run on a kernel driver, which allows access to the computer system. OSNews expressed concern that Riot Games and its owner, Chinese technology conglomerate Tencent, could spy on players and that the kernel driver could be potentially exploited by third parties.[95] However, Riot Games stated that the driver does not send any information back to them, and launched a bug bounty program to offer rewards for reports that demonstrate vulnerabilities with the software.[96][97] The bounty will reward white hat hackers between \$25,000 to \$100,000 for reports on its vulnerabilities, with the pay being based on the severity of the exploit.[98] Gameplay bugs do not qualify for this bounty.[98]

Valorant will not run on Windows 11 if the system does not have a Trusted Platform Module (TPM) 2.0 compliant cryptoprocessor and UEFI secure boot enabled, as mandated by Microsoft's minimum system requirements for the operating system.[99]

Valorant has an active esports scene. The highest tier of Valorant Esports is run by Riot Games.

In 2020, Riot Games launched "First Strike", a tournament designed to establish a foundation for an esports scene to be created with the game.[100]

In November 2020, Riot Games announced the Valorant Champions Tour (VCT), which is a year-long tournament circuit consisting of three levels:

Masters - international competitions in mid-season, divided into many stages

Challengers - regional competitions which are qualifiers for Masters

Teams will qualify directly for Champions via top places in Circuit Point Standings of their region, based on results of Challengers and Masters. Teams who are at middle places in Circuit Point Standings will have one more chance to qualify for Champions by winning the Last Chance Qualifiers (North America, EMEA, South America, Asia Pacific).

In 2023, Riot Games announced a partner team model for their Valorant Champions Tour.[101] The 30 initial franchised teams, along with two invitees from China, played their first LAN tournament at the VCT LOCK//IN at So Paulo, Brazil, which officially marked as the beginning of the VCT 2023 season.[102][103] These partnered teams compete in 4 regional leagues to qualify for Masters and Champions.

Masters: international competitions in mid-season, divided into two stages

International Leagues: four competitions divided by international territory (Americas, China, EMEA, Pacific) which are qualifiers for Masters and Champions

Ascension: four competitions divided by international territory (Americas, China, EMEA, Pacific) which serve as promotion into the International Leagues

Challengers: regional competitions which are qualifiers for Ascension

VCT — Valorant Champions Tour Overview

The Valorant Champions Tour (VCT) is a global competitive esports tournament series for the video game Valorant organised by Riot Games, the game's developers. The series runs multiple events throughout each season, culminating in Valorant Champions, the top-level event of the tour. The VCT was announced in 2020, with its inaugural season taking place in 2021.

In November 2020, Riot Games announced the first Valorant Champions Tour, a tournament series divided into three tiers: Challengers, Masters, and Champions. Challengers would act as the lowest tier, split into seven regions: North America, Brazil, Latin America (Hispanic America), EMEA, Southeast Asia (which later included South Asia and Oceania, becoming the Asia-Pacific region), Korea, Japan. Teams that advance past Challengers would move on to Masters, where teams would not be divided by regions anymore, and the top 16 teams from Masters would move on to Champions, the final tournament of VCT.[2] In February 2021, they announced the VCT Game Changers, a supplementary tournament initiative for women and marginalized genders.[3]

Riot hired esports infrastructure company Nerd Street Gamers as operators and producers for all North American Challengers and Masters events.[4][5] They also hired several third-party companies to broadcast their events, such as Liga de Videojuegos Profesional (LVP) for their Spanish-language broadcasts and LetsPlay.Live for their Oceania broadcasts.[6] The 2021 Champions tournament took place on December 11-12 at the Verti Music Hall in Berlin, Germany, concluding with team Acend defeating Gambit Esports in the grand finals by a score of 3-2.[7][8]

Over 10,000 teams competed in the VCT in 2021. Outside of Champions, VCT saw its highest viewership at the Reykjavik Masters tournament in May, with a peak viewership of 1,085,850. The Champions grand finals match in December reached a peak viewership of 1,089,068, making it the VCT's highest peak viewership.[9][10]

Riot made several changes to the format of VCT for its second iteration. While the overall structure of Challengers, Masters, and Champions remained unchanged, it reduced the number of stages of Challengers and Masters events from three to two. VCT Challengers began on February 11, 2022.[11] The 2022 Champions Tournament took place from September 1 to 18 in Istanbul, Turkey.[12]

Riot Games announced a new format starting in 2023.[13] The season will be split into three international regions Americas, EMEA, and Pacific instead of the 7 regions format used in previous years. Each international region will have its own International League that replaces the Challengers to become the domestic competitions to qualify for Masters and Champions. On September 21, 2022, Riot Games announced the thirty teams that had been selected as part of their new partnership format in 2023-2027.[14][15]

In February 2023, Riot partnered with Grid Esports for performance analysis data.[16]

For China, Riot Games showed favor towards players here by giving Chinese teams a number of direct slots to participate in global tournaments (Masters and Champions) through third parties competitions in Hong Kong server, instead of having to play through Pacific league. In a June 2023 press conference, Riot COO Whalen Rozelle confirmed that Valorant would launch in China in July under the name (lit. 'Fearless Contract'), with hopes to launch a VCT league there in 2024.[17] Shortly after in August, Riot announced an own regional league for China, and raising the number of partnered teams to 40.[18]

This era later was decided to end in 2026, one year earlier than originally planned.

Immediately after its first year of implementation, the franchising system that Riot Games had made for VCT was criticized as being unsuitable. It created significant difficulties for non-partner teams, as the path to going professional and qualifying for Masters/Champions was no longer open, requiring more time and financial resources. These teams also did not receive the same level of support as partner teams unless win the Ascension, facing the risk of having their talent poached and struggling to maintain both financial stability and competitive strength. In the fact, many non-partner teams were eventually forced to disband after failing to win Challengers and Ascension tournaments. A lot of criticisms were directed at Riot Games, specifically from the 2021 Champions winner team Acend[19] and the two-time Masters winner player TenZ,[20] for focusing

primarily on tier 1 while gradually ignoring the tier 2 scene.

Therefore, to fix the failure of the franchising system, on April 8, 2026, Riot Games announced another format overhaul starting from the 2027 Valorant Champions Tour. The new format retains the three-split system but using the regional open qualifier system from the pre-2023 era. All teams will have to play through the qualifiers, including partner teams, meaning there will be no tier 2 system. In Stage 1 and Stage 2, the top teams from open qualifiers will compete in a new type of international event known as Cups, which qualifies the top teams to Masters and Champions. The Kickoff stage will continue to utilize a separate format for its international tournament. Leagues will be disbanded but the four major regions will remain intact, with each region hosting their respective cups. The partnership system will also switch to a two-year cycle in 2027, retaining existing incentives in addition to placement to a later round of open qualifiers. Non-partner teams will also receive additional financial support for sustainability.[21][22]

In 2023, 30 teams are selected to be partner teams in International Leagues for five years (to 2027) with 10 teams per region. Non-partner teams compete in many sub-regions of Challengers events to qualify for "Ascension" events. The Ascension events in 2023 and 2024 had one winner per region, which earned them a temporary (initially two-year) promotion into their regions' International League. The promoted teams have a chance to qualify for the global tournaments (Masters and Champions), as well as get benefits provided to other partnered teams. Through the Challengers promotion system, International Leagues expanded by one team each, until they reached a cap of 12 teams in each region in 2025 (beforehand this was supposed to be a 14-team cap by 2027).[23][24]

For 2025, the two temporary teams per International League can stay up via qualifying for Champions, compete in Ascension to stay in the league if they finished 5th to 8th, or get relegated back to their Challengers region if finishing 9th to 12th; only one of the guest teams per region can stay up via Champions, with the best performer of the two guests taking the spot if both qualify.[25]

Riot Games later decided to end the first era of franchising in 2026, one year earlier than originally planned (2027), in order to reassess existing partners and prepare for the next franchising era.

Teams in each International League play on LAN in a centralized local: the Riot Games Arena in Los Angeles for VCT Americas,[26] Riot Games Arena in Berlin for VCT EMEA,[27] and Sangam SOOP Colosseum in Seoul for VCT Pacific.[28]

Right from global launch, although Valorant had not been licensed for release in China, Riot Games showed favor towards Chinese players by allowing Chinese teams to participate in global tournaments (Masters and Champions) through achievements in domestic tournaments organized by third parties, played at Hong Kong server.[i]

Since 2024, with Valorant licensed for release servers in mainland, Riot launched the VCT CN specifically for the only country that they considers a pro region on the same level as the three International Leagues for many countries, as well as competition slots for only teams from China at Masters and Champions.[37] They also announced the second Masters event of the year to take place in Shanghai and released a new Chinese agent Iso alongside previous agent Sage.

Similar to three International Leagues, ten Chinese teams were selected as partner teams for the first franchising era of the China League (originally planned to run until 2027, but later decided to end in 2026 at the same time as International Leagues), with two additional non-partner teams qualifying through China Ascension. The China League is based at the VCT CN Arena in Shanghai.[38]

The Valorant Masters is a biannual Valorant international tournament organized by Riot Games in the middle of the year since 2021.[40][41] Similar to the Mid-Season Invitational for League of Legends, it is the second most important international Valorant tournament after Champions.[42] There are usually two Masters tournaments each year. Teams must place near the top of their regional league to qualify for Masters.[43][44]

The Valorant Champions is the annual professional Valorant world championship tournament hosted by Riot Games and is the culmination of each VCT season. It includes spots with points earned throughout the year. Teams compete for the world champion title of Valorant esports.

Non-partner teams compete in Challengers events of sub-regions in Americas, EMEA and Pacific to qualify for "Ascension", the yearly promotion event to the respective International Leagues. Originally, it was announced that teams would have two-year stays in their International League after winning Ascension, with

one team promoted every year until 2026, when two teams would be promoted every year until 2028. The leagues would have 14 teams each, totaling to 42 teams across the three leagues.

On June 21, 2024, Riot announced changes to the Ascension format from 2025, with teams promoted to the International Leagues for one-year stays instead, after which they would be relegated to Challengers again if they did not finish in the top 8 in their region's regional League; if they qualified for Champions however, they get to stay for another year; if they finished in the playoffs of the International League, they qualify for that year's Ascension for a chance to keep their place in the league.[25]

In 2023-24, there are 23 minor regional leagues across the three international territories.[45] From 2025, they got decreased to 15.

In 2026, due to end the first franchising era one year earlier, Ascensions will be not hosted. Instead, Challengers teams will have chance to join their respective VCT league's in Stage 2 play-off, giving them a pathway to qualify for Champions directly.

Valorant Game Changers is a series of domestic competitions for women and other marginalized genders within Valorant esports.[46] Teams that finish in top places qualify for the Valorant Game Changers Championship, the world championship event of Game Changers, and also earn the chance to be promoted to their region's Challengers league.

International Leagues & China League winners

(*) Non-partner teams in franchise system

* Team or organization no longer participates in Valorant esports.

The original masters trophy was unveiled by Riot at a May 2021 media preview event in the build up to Masters Reykjavik. It features a metal bottom and a glass top. The trophy was redesigned in 2023, again by Volpin Props, to be reusable for Masters tournaments in multiple regions.[63] It stands at 18 inches (46 cm) and features a swappable 'Radianite' core. The body of the trophy is palladium-plated with plastic components.

Each trophies were designed with motifs reflecting the game's agents or maps. For Masters Tokyo, it featured duelist Yoru's ultimate Oni mask. For Madrid, it featured butterflies, which is the motif for the newest controller, Clove. For Shanghai, it featured duelist Iso's lilac-themed shield. For Bangkok, it featured a diamond, which is the ability icon for the newest duelist, Waylay. For Toronto, the trophy's core is redesigned in a pink-colored iceberg, which is the theme for the newest map, Corrode. For Santiago, it featured a soundbox, which is the motif for the newest controller, Miks.

The Valorant Champions trophy was first unveiled ahead of Valorant Champions 2021. Also designed and built by Volpin Props of Atlanta, Georgia, it stands at 2 feet (61 cm) tall and is partially 3D-printed, with 24 karat gold decoration overlaid.[64]

^ a b On November 18, 2025, Riot Games terminated the VCT Pacific partnership slot occupied by Talon Esports, who had been a partner since 2023, for financial insecurity and failing to pay its players and coaches in a timely manner. Their spot will be taken by FULL SENSE, retaining Talon's roster.

^ a b On September 6, 2025, Riot Games terminated the VCT EMEA partnership slot occupied by Movistar KOI, who had been a partner since 2023, for violating the Team Participation Agreement.[29] Their replacement would be Gentle Mates, who were initially an ascension team, promoted to VCT EMEA in 2024 and relegated after finishing 9th-12th in 2025.[30]

^ Team had competed as Giants previously. On 14 December 2023, Giants Gaming and Excel Esports announced a merger, forming GiantX.[31]

^ a b While The Guard won the 2023 Americas Ascension tournament, which guaranteed that they would participate in the VCT Americas League, on August 29, 2023, it was announced that they would not compete in VCT Americas for their stint (2024 and 2025) as they had not agreed to the Team Participation Agreement.[32] On September 22, 2023, it was announced that G2 Esports had acquired all but one member of The Guard's roster, thus taking over their slot.[33]

^ a b On 20 March 2026, Riot Games announced that Eternal Fire would replace ULF Esports in VCT EMEA, following reports of ULF failing to operate in line with league standards, including failure to pay salaries and bonuses tied to their Ascension win. ULF voluntarily withdrew from the league.[34]

^ a b SLT Seongnam earned promotion to the VCT via the 2025 Pacific Ascension. On 12 December 2025, it was announced that SLT would compete as VARREL for the 2026 VCT Pacific season, as Japanese organization VARREL had acquired the roster.[35]

^ a b PCIFIC Esports earned their spot in VCT EMEA via winning the 2025 Ascension EMEA as BBL PCFIC, an affiliate partnership with BBL Esports.

^ a b Sin Prisa Gaming earned promotion to the VCT after winning the 2024 Pacific Ascension. On 25 November 2024, it was announced that Nongshim RedForce had bought Sin Prisa, taking with them their guest spot in VCT Pacific.[36] The team won the 2025 Pacific Ascension as Nongshim RedForce.

^ Although it has the same status as the game had not been officially released locally, in contrast to the favor given to China, Riot Games did not allow players and teams from Vietnam to participate in 2020 First Strike and 2021 VCT stage 1.

^ a b Relegated to Challengers for 2026 after finishing 9th-12th in their respective International League.

^ a b c Due to winners of the 2023 Pacific Ascension, BLEED Esports promoted to VCT Pacific League in 2024 and 2025 seasons. However on 4 October 2024, Riot removed them from the VCT Pacific League, citing a "failure to comply with critical reporting requirements and other key obligations under the Team Participation Agreement", and replaced them with BOOM Esports, which were runners-up of the 2024 Pacific Ascension.[39]

^ Team competed as KOI before. In 2024, KOI and Movistar Riders merged with MAD Lions, forming Movistar KOI.

^ Relegated to Challengers for 2026 after finishing 3rd in VCT Pacific Ascension; the team finished 5th-8th in VCT Pacific for 2025.

^ The 2026 Kickoff stage didn't feature a grand final match, instead culminating with bracket finals. The team listed in the region's first seed (the winner of the upper bracket finals) heading into Masters.

^ Riot Games did not host an international Masters event for 2021 Stage 1 due to the COVID-19 pandemic. Instead, each region had its domestic Stage 1 Masters.

^ To introduce the new partnership system, Riot Games replaced the first split of International Leagues with a season's kick-off global event called "VCT LOCK//IN" for all 30 partner teams and 2 invited teams from China. The winning team of this event is regarded to have won a Masters title.

^ Although this event had been named "Masters Tokyo", it was held in Chiba.

^ The final three days of the tournament were held in neighbouring Inglewood.

^ The final three days of the tournament were held in Incheon.

^ The group stage and the majority of the playoffs were held in vry-Courcouronnes.

^ FunPlus Phoenix is competing in China currently. Before 2023, they had competed in the CIS sub-region and EMEA. This roster then mostly competed in Natus Vincere.
